Notice of Counterfeit Products

Dear Valued Customer,

It has recently been brought to our attention that a GC product line, purporting to be from Peak Laboratories, may have been introduced into the UHP gas monitoring market in Asia. Please be advised that Peak Laboratories has not authorized the manufacturing of these products, has no affiliation with the manufacturer, and the products have not been vendor qualified.

Similarly, we have been unable to locate any independent third party verification data that the counterfeit products meet their claimed 0.1ppb detection limits.

Please be advised that the counterfeit products are being sold in Taiwan and China. We are currently reviewing all options with US and China-based counsel and will take swift legal action against the seller and manufacturer. If you have any orders outstanding for Peak Laboratories products, please contact us for a list of our currently authorized distributors. If you have recently received an order for a Peak Laboratories product please feel free to contact us to verify its authenticity. If you believe that you may have received counterfeit analyzers, please let us know. We can also tell you if your order was ever placed with us. A genuine Peak analyzer will display the logo found at the top of this letter on the front panel of our products.

As the original inventor of the Reduction Gas Detector (RGD), also known as RCP or RCD, and developer of various analyzers based on this and FID technology, including the Trace Analytical RGA5 and TA7000 product lines, we will stand by our genuine products and assist you in making sure you are not provided a counterfeit product.

You can contact us directly by phone at (650)-691-1267 or email (sales_service@peaklaboratories.com).

Best Regards,

Clint Ostrander
Peak Laboratories LLC, Chief Technical Officer
Founder and CEO, Trace Analytical Inc.
